

Finding Evidence

Marco is the lead actor working on a Hollywood blockbuster film set to be premiered in December 2020. Marco has two people working with him: Michael, his stunt double; and Matthew, his understudy filling in to dance Tango for Marco. One day, it happened that Marco, Michael, and Matthew were all working on set together to film a tango scene that turns into an action-packed getaway.

What Marco was not expecting was to be a suspect in an investigation. The following morning, he showed up with Michael and Mathew and heard that an expensive prop was stolen the night before. Only Marco, Michael, and Mathew were in possession of it while filming.

All three of their personal hard drives have been confiscated and it is your job to investigate Marcos' hard drive. However, the worker who confiscated their hard drives did not label them. Start by using [Start.zip](#) (Click link and download the file and SAVE AS (160 KB on disk)) to figure out which image to download and go through.

After using the clues found in the Start file use the correct hard drive to answers the questions below:

- [Hard Drive A \(HDA\)](#)
- [Hard Drive B \(HDB\)](#)
- [Hard Drive C \(HDC\)](#)

Directions:

Use Linux to start the investigation to find which image to load into Autopsy (or FTK Imager at home) for analysis. You are required to show screenshots of how you got your answers and describe how you got there. In addition, talk about what your thought process was for doing things that way. Make sure to include your chain of custody in a separate file.

Answer the following:

Use the correct image to find out:

1. What time Marco clocked out on 3/21/2020,
2. What building Marco was in after dinner,
3. What is Marco's personal email to help find information towards the case.
